

LEGIONELLA FILTER SHOWER HEAD & TAP

At least 92 days of
protection against
waterborne infections

Reliable and point-of-
use protection

Quick and easy to
install or replace

LEGIONELLA FILTER SHOWER AND TAP

PRODUCT DESCRIPTION

Membrane filtration systems for trapping legionella and other contaminants from drinking water. Can be installed as a shower head or as a tap filter.

APPLICATION

Point-of-use safety filter for water systems where there is a potential risk of contamination with legionella or other harmful pathogens.

LEGIONELLA AND BACTERIA CONTROL

Legionella shower and tap filter systems are widely used in hospitals, nursing homes, and care facilities, ensuring the safety of patients, residents, and staff. Our sterilized range of shower and tap filters has proven to be an excellent choice for ensuring water safety in high-risk areas such as hematology, oncology, burn centers, critical and intensive care units, and operating rooms.

Inhaling legionella bacteria can cause severe pneumonia, known as Legionnaires' disease. Infection occurs through inhalation of legionella bacteria that can enter the air as microscopic, aerosolized water droplets. Legionella inhalation can occur in various situations:

- Water spraying, such as showers and taps with spray heads
- In a hot tub with water bubbles
- Humidification through devices that aerosolize water, such as CPAP machines or humidifiers
- The use of wet cooling towers, water systems that cool buildings or industrial processes by spraying water

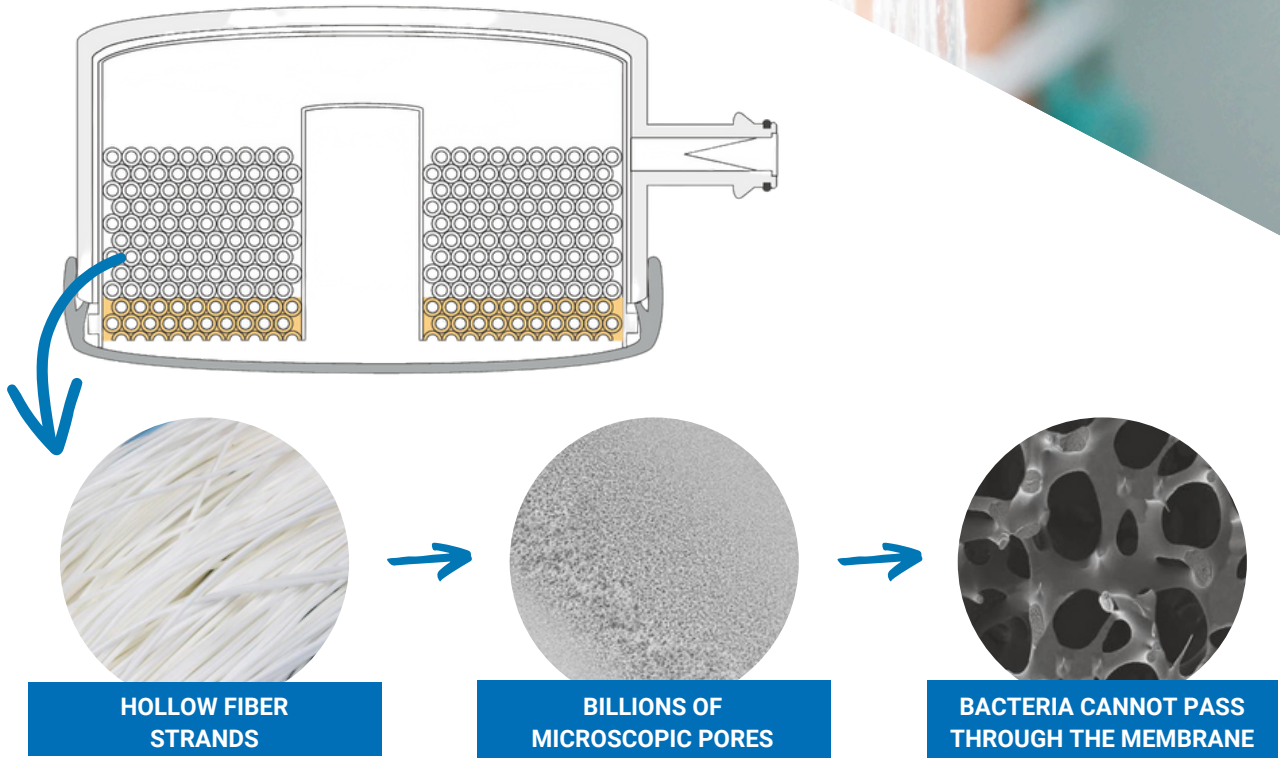

In practice, the following locations with a collective water supply or shared plumbing network have a higher risk of legionella contamination in drinking water. These are referred to as 'priority' locations:

- Asylum seeker centers
- Swimming facilities such as pools and saunas
- Gas stations, truck stops, and roadside restaurants with showers
- Holiday parks and (mini) campgrounds
- Correctional facilities such as prisons and police stations
- Marinas
- Lodging accommodations such as hotels, guesthouses, and boarding houses
- Hospitals and healthcare facilities

Certification: The medical water filters, sterile series, comply with the requirements of the Medical Device Directive 93/42/EEC

LEGIONELLA FILTER SHOWER AND TAP

LEGIONELLA FILTER RANGE

Starter kit legionella shower head

Starter kit legionella tap filter

Various stainless steel adapters for mounting the legionella tap filter on existing faucets of various brands

**External 24 mm to 22 mm
External 21.5 mm to 22 mm**

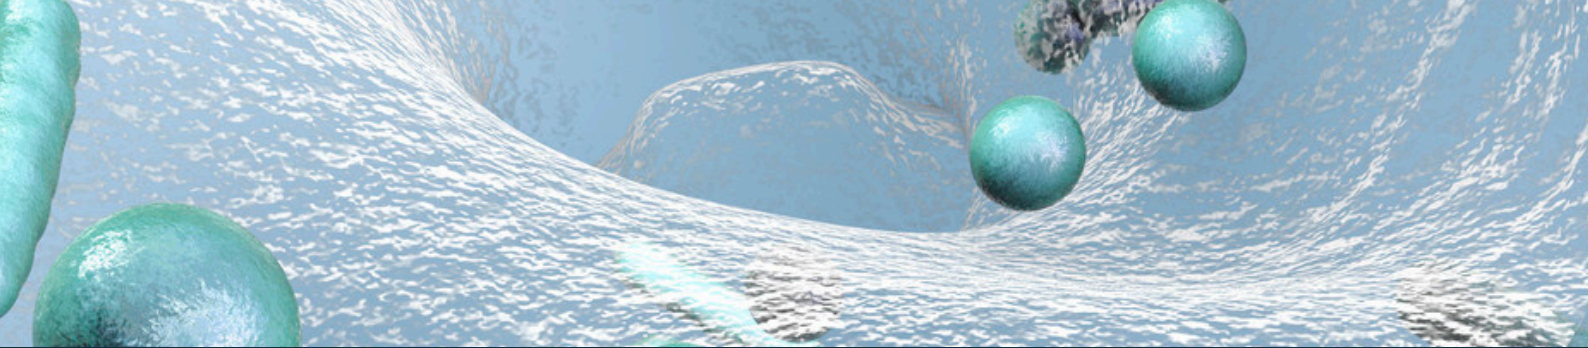

External 18 mm to 22 mm

External 1/2" to 22 mm

18 mm internal to 22 mm external
